Front or Rear Door Instructions:

1. Using panel removal tool gently pry the grill over the speaker loose. Take your time and work all the way around the grill. Only loosening one side and then forcing the grill away from the door might result in damage to the plastic fasteners that retain it. Fig. 1
2. With the grill removed, loosen and remove the screws retaining the speaker. You will notice that there are two different length screws, take note of the locations from which they are removed for proper reassembly. Fig. 2

3. Disconnect wiring and remove existing speaker. Fig. 3
4. Connect the speaker wiring and install the upgrade speaker making sure to replace the screws in their proper locations. Fig. 4

5. Replace the speaker grill by lining up the round retainers in the holes and gently tapping into place.
